Nutrition — 2026-05-30 08:04

This is educational guidance only. Consult a registered dietitian or a healthcare provider for personalized medical nutrition therapy, especially since you are taking medications such as Lisinopril and Metformin.

Alternatives — 2026-05-30 08:04

Always consult your doctor before switching medications

Side Effects — 2026-05-30 08:04

{'medicine': 'Ibuprofen', 'generic_name': 'Ibuprofen', 'drug_class': 'Nonsteroidal Anti-Inflammatory Drug (NSAID)', 'common_side_effects': ['Nausea', 'Vomiting', 'Diarrhea', 'Constipation', 'Abdominal

Medication Safety — 2026-05-30 08:04

The addition of Ibuprofen to the patient's existing regimen of Metformin and Lisinopril may increase the risk of hyperkalemia, reduce the effectiveness of Lisinopril, and worsen renal function. Close monitoring of blood pressure and kidney function is recommended.
